

iSymphony

Features

- Free download from iTunes®
- Simple touch control
- Customisable button labels
- Dimming & RGB control
- Light-Show control
- Fast start-up

Part No. iSymphony

Description

iSymphony is a software application for Apple's iPhone or iTouch®, which can be downloaded *free* from Apple's iTunes® web store.

Used in conjunction with the Light Symphony's WiFi base-station (part no. LS30950WIFI) it provides the ultimate remote control for your lighting.

The screen scrolls to show Area on/off buttons 1-9 and the Light Show. The text above each button is easily changed to show meaningful labels for *your* garden.

Specification

Range	-	Standard iPhone 802.11b/g WiFi: approx. 100meters to base-station (or router network)
Application name	-	iSymphony
Controls	-	Whole Garden (all), Areas 1 -9 and Light Show
Protocol	-	Light Symphony over UDP IP socket
Compatibility	-	iPhone and iTouch® running firmware 3.01 or later
WAN routable	-	Not supported

Application Example

How to use it

The 'iSymphony' application turns an Apple iPhone or iPod® into an intuitive, touch operated remote control.

Light Symphony's WiFi Base Station (part no. LS30950WIFI) allows a WiFi connection from an iPhone or iPod® running the 'iSymphony' application.

Where there's an existing WiFi network or router, the iPhone and Base-station connect by entering the security details of the network on both devices. Where there's no existing WiFi network, the iPhone or iPod can connect directly to the base-station using 'Ad-Hoc' mode.
